

PROJECT EXECUTABLE FILES

Field	Details
Date	29/09/2026
Team ID	6ab7959e4c4a9ef0de66bbbee
Project Name	AI FitTrack API
Maximum Marks	3 Marks

Project Executable Files

This section documents the executable/deployable submission for the AI FitTrack API project. The evaluator should use the repository and the setup instructions below. Items not established from the supplied project documentation are marked accordingly.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes – GitHub repository provided
2	README / Setup Guide	To verify in repository
3	requirements.txt / package.json / dependency file	Yes – Node.js/npm project documentation specifies npm dependencies
4	Database schema / seed files (if applicable)	Applicable – MongoDB/Mongoose schemas are documented; seed files not verified
5	Environment configuration file (.env.example or similar)	Configuration variables are documented; .env.example not verified
6	Deployed application URL (if hosted)	Not provided
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA – backend REST API project
8	Dockerfile / Containerization config (if applicable)	Not verified
9	Test files and test results	API testing is documented; test files/results not independently verified
10	Demo video or walkthrough (if required)	Not provided

Step 2: File / Folder Structure

Project Structure	Description
config / database configuration	MongoDB/Mongoose database connection configuration.
models	User and Workout data models/schemas.
routes	Authentication, workout and AI API routes.
controllers	Request handling and controller logic.
services	Gemini AI, JWT and password-related services.
middleware	JWT authentication and centralized error handling.
server / app entry	Express.js backend startup and API gateway.
.env	Environment variables such as database URI, JWT secret and Gemini API key; secrets should not be committed.

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not provided
Login Credentials (Demo)	Not provided
Platform / Hosting Provider	Not provided
Repository Link	https://github.com/deepikam03/ai-fittrack-api
Demo Video Link	Not provided

Step 4: Run Instructions

1. Clone/download the project repository. 2. Install Node.js and npm. 3. Run npm install to install dependencies. 4. Create/configure the .env file with the required MongoDB connection string, JWT secret and Gemini API key. 5. Start the backend using the project's npm start command. 6. Use Postman/Thunder Client to test authentication, workout and AI endpoints. Exact start command should be confirmed from the repository README/package.json.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Hosted/deployed URL was not provided in the supplied project information.	Use the local setup instructions or repository.
2	Actual runtime execution and repository contents were not independently verified in this document.	Verify by running the submitted source code.
3	Demo credentials and demo video were not provided.	Add them if required by the evaluator.
